Kirill Makarov

Unity Developer | C# | Gameplay Systems | Multiplayer | WebGL | AI Agents

kirill.makarov301@gmail.com | +972-54-655-3533
LinkedIn | GitHub | Portfolio

Unity/C# developer with commercial experience since 2022 across WebGL, Android, and desktop. Builds gameplay systems, multiplayer features, backend integrations, and delivery tools. Creates AI agents and bots and works with coding agents daily as a core part of development. Combines direct technical contribution with leadership, code reviews, and mentoring a team of six developers.

Professional Experience

English Room | Unity Tech Lead / CTO | 2025-Present

- Built the architecture for a proprietary educational game from scratch, separating gameplay, UI, and data through modular C# systems, ScriptableObjects, and event-driven communication.
- Led and mentored six developers, including a lead developer, and conducted code reviews while contributing directly to implementation.
- Implemented Photon Fusion 2 Shared Mode multiplayer with session management, player spawning, movement synchronization, and teacher-controlled interactions; integrated Firebase Auth and Firestore for access validation and persistent player data.
- Built a custom JavaScript bridge for Firebase in WebGL and a standalone C# launcher supporting full installations and patch updates.
- Improved loading through Addressables, asset compression, and remote delivery; implemented adaptive graphics and led the move from WebGL to desktop to address platform constraints.

MYQ | Unity Developer | 2022-2025

- Delivered 10+ projects across WebGL, Android, and desktop, implementing gameplay systems, UI, and physics.
- Integrated APIs, handled WebGL deployment, and collaborated with designers to refine interaction flows and usability.

Technical Skills

Core: C#, Unity 2D/3D, Unity 6, gameplay systems, physics, animation, Unity UI, Input System.

Systems: ScriptableObjects, interfaces, event-driven design, state machines, object pooling, JSON persistence.

Integration: Photon Fusion 2, Firebase Auth / Firestore, WebGL-JavaScript bridges, Addressables.

Tools: Git, GitHub, Rider, custom Unity Editor tools, Unity Test Framework, Blender, Figma.

AI agents and workflows: Builds AI agents and bots; uses Codex and AI agents daily throughout development, with hands-on code review and validation.

AI integration: Local Whisper speech recognition integrated into Unity microphone and practice workflows.

Selected Personal Projects

Everrealm | 2D action-platformer vertical slice

Built combat, loot, trading, skill progression, and JSON saves. Implemented item and skill purchases with rollback on failure; added Editor tools and regression tests for purchase rollback, duplicate skill purchases, loadout conflicts, and save restoration.

English Quest | Educational vertical slice

Built three quest-linked mini-games and two-player Photon Fusion Shared Mode with independent local progression. Implemented runner-specific camera collision for Multi-Peer physics scenes.

Hurricane Emergency | Educational simulation prototype

Built a shared flow for ten scenarios using ScriptableObject lesson data, plan validation, runtime event assessment, and a WebGL host bridge.

Fluent | Local AI speech-practice prototype

Integrated microphone recording and local Whisper transcription with lesson data, saved progress, and transcript-based practice feedback.
