Summary

Unity Developer and Tech Lead with experience building scalable game systems, multiplayer features, and production-ready applications across WebGL, mobile, and desktop.

Specialized in Firebase integration, performance optimization, and modular architecture using ScriptableObject and event-driven design.

Led development from scratch, built and mentored a team of 6 developers, and delivered systems optimized for real-world constraints, including WebGL limitations and remote content delivery.

Skills

Unity: Unity (2D/3D, WebGL, Mobile, Desktop), C#, UI (Canvas), physics, animation.

Architecture: SOLID, Event-driven (Observer), Strategy, Factory, State Machine, Object Pooling, DI, Service Locator.

Backend: Firebase (Auth, Firestore, Hosting), WebGL ↔ JS bridge Photon (real-time multiplayer).

Optimization: Addressables, asset compression, remote content (Firebase / R2), adaptive graphics.

Tools: Blender, Photoshop, Illustrator, Figma.

Experience

CTO / Unity Tech Lead - English Room

2025 - Present

- Built game architecture from scratch using modular and scalable approach
 - Led and mentored a team of 6 developers (including lead dev), conducted code reviews
 - Reduced load time by ~40% using Addressables, compression, and remote asset delivery
 - Implemented real-time multiplayer features using Photon
 - Developed standalone C# launcher for game distribution and updates (full + patch system)
 - Integrated Firebase (Auth, Firestore) with whitelist validation and persistent player data
 - Built WebGL-compatible Firebase integration via custom JavaScript bridge
 - Designed adaptive graphics system (resolution & performance scaling)
 - Stabilized performance at ~60 FPS under real gameplay conditions
 - Led migration from WebGL to desktop due to scalability constraints
-

Unity Developer - MYQ

2022 – 2025

- Delivered 10+ cross-platform projects (WebGL, Android, Desktop)
 - Implemented gameplay systems, UI, and physics
 - Worked on API integration and WebGL deployment
 - Collaborated with designers to improve UX
-

Architecture

- Clear separation: UI / Game Logic / Data
 - Data-driven design using ScriptableObject
 - Event-driven communication between systems
 - Modular architecture using interfaces and patterns
-

Training

- Designed and led internal Unity course for junior developers
 - Trained candidates in real production technologies
 - Prepared developers for internship and team integration
-

Languages

- English - Fluent
- Russian - Native
- Hebrew - Native
